SUMMARY

Hello, I am a QA engineer. I am the only tester in the company. So I had to set up all the testing processes from scratch.

My responsibilities include testing and requirements analysis. Assessing the need to change existing functionality to improve the web app. Functional testing, smoke testing and regression testing. Writing bug reports, compiling test documentation. Functional and non-functional testing of Android and iOS mobile apps. Mobile API testing.

I also set up a test framework for automated testing. My stack is java, maven, testng, selenium. And now I'm developing test automation

SKILLS

- Testing theory (**development methodologies; types and levels of testing; test design techniques; test documentation; bug reports**)
- Experience in Agile software development methodology (**Scrum, Kanban**)
- Work in bug tracking system (**JIRA**)
- Mobile application testing (**Android Studio, Xcode**)
- Web application testing (**DevTools**)
- API testing (**REST - Postman; GraphQL - Insomnia**)
- Working with traffic analyzers (**Charles, Fiddler**)
- Performance testing (**Locust, Jmeter**)
- Working with databases (**MySQL**)
- Basic knowledge of SQL (**Select, Join, Insert**)
- Version Control Systems (**Git**)
- Knowledge of test automation (**Java+Selenium**)
- Basic knowledge of **RestAssured** framework
- Basic knowledge of **Python**

LANGUAGE

English - B1 (*intermediate*)

Russian - *native*

PORTFOLIO

EDUCATION

2022

RedRoverSchool by Sergei Demyanenko

- Automation testing Java+Maven+TestNG+Selenium

2021-...

Self-education in Quality Assurance

- Articles, books, videos and simulators in the public domain
- "Software Testing" course of BelHard

2020

IT-Academy

- C# programming

2014 - 2020

Witte Moscow University

- Information technology, Business analytics and applied informatics

WORK EXPERIENCE

09.2021- ...

FindSport

QA Engineer

- Functional testing and verification of compliance with the documentation of new Web application functionality (smoke, regression, documentation analysis)
- Functional and non-functional testing of a mobile application for Android and iOS
- Writing and maintaining test documentation for web and mobile applications
- Analysis of the introduction of new and assessment of the need to change existing functionality to improve the quality of the web application
- Compiling bug reports and checking their correction
